For your
IT GROUP

to PROVIDE

what your
MARKET needs

what your
BUSINESS needs

what your **USERS**
and **MANAGERS**
need your **SYSTEM**
to deliver

“Pro PowerKit™” is the evolution of TailorPro, the tried and true system for creating Non-Invasive Customizations, with many significant new capabilities. Nine years with 100% success and counting!

Pro Workflow Engine:

- business procedures, roles, rules and training
 - integrated with the QAD applications
- Transaction Automation:
- Audit & Security included as standard functionality
- Unlimited Data Selection and Filtering
 - add new criteria to any function, e.g. Sales Order Allocations with unlimited variables to meet your unique sales program requirements
 - control user authority and access to data based on context and content
- Anchors with context sensitivity for user/group/locale
- Project ID for grouping and managing disparate anchors as a set
- Many new functions in the Developers’ PowerKit
 - Users state a minimum of 400% productivity improvement over traditional methods
- PowerKit eLite: no-programming-required for many customization needs
 - adding new fields anywhere in the business process
 - invoking custom complex logic
 - edit screens, including field default values
 - many other customizations using the screen-driven interface
- Integration with QXtend enables any custom functionality in the user interface to be replicated in automated batch processes
- Integration of your custom functions with bar-code applications, Eagle among others.
- Non-Invasive Customizations create no hindrance to applying patches, service packs and upgrades of your QAD applications

Is your business system missing some functionality that your business requires? Does current functionality not meet your actual needs? Contact ProStar Software to find how efficiently and economically your QAD applications can be adapted to provide all the functionality that your business requires, in just the way you want.
